Following yesterday's call, HQEM feels that some WG's members need to better understand BEMI's position pertaining to the current methodology. In particular, it would be very helpful if BEMI could articulate how, in their mind, the current proposal is detrimental to internal generators and would favour "wheelers". For now, HQEM feels BEMI's position is still somehow vague and unsubstantiated.

Once other traders better understand BEMI's cause(s) for concern, the whole group will then be in a better position to address those concerns and try to work around them.

As such, details / explanations / illustrations should be provided enough in advance of the next meeting to allow WG members to reflect on it and hence, would make the next meeting much more productive.

Sincerely,

Erik Bellavance
