Subject: RE: IESO Power Outage Proposal

Hi Tuire,

As discussed yesterday we have a few concerns with regards to the recent changes made to this proposal to include validation of files provided in response to Communications MTR's. I have attached a draft copy of what Hydro One will be doing to avoid creating conflicts with the proposed changes being implemented through this Power Outage proposal. Please review and let me know if you have any questions and/or issues with Hydro One MSP's method of dealing with the Communications MTR's.

Secondly and also as discussed we would like to see the case #'s included in the issued comments within each Power Outage MTR. This would be a significant benefit to both the IESO & MSP's that will allow staff to quickly reference and determine what scenario has been applied.

The only other thing that we would like you to consider is that in each case within the chart both Main & ALT meters status during the time period(s) in question be included in the issued comments. This can also be determined if case #'s are provided in the issued comments but if cut and paste comments are to be used these additional comments included can only help.

Thanks for your time and effort with regards to these changes and we look forward to making this work.

Regards,

Gordon Messervey
Hydro One - Supervising Meter Support Tech.
