Subject: FERC NOPR on NERC Standards

IESO Standards Communication:

As you are aware, FERC released a [NOPR on Mandatory Reliability Standards](#) for Bulk Power Systems on October 20, 2006. Attached is a draft summary of the NOPR which highlights some of the features of the NOPR as well as modifications requested by FERC to some of the already accepted NERC standards. Formal IESO comments on the NOPR will be shared with you once these have been finalized internally.

Additionally, NERC released the results of the re-circulation ballot for [the Missing Measures and Compliance Elements](#). The ballot received the required number of votes to pass (69.48%) and the standards would be presented, for adoption, to the NERC Board of Trustees (BOT) on November 01, 2006.

The IESO provides this information to not only support complete understanding but also to support the development of the NERC/ERO standards and processes which are applicable to all North American Entities and Market Participants. Please let us know if you have any concerns, comments, or suggestions.

Regards,

Biju Gopi,
