Subject: IESO draft comments on NPCC A-12 criteria document

IESO Communication on Standards

As you are aware, NPCC had posted the A-12 criteria (System Restoration Criteria) document as part of their [Open Process & Interregional Review](#) procedures. Attached are the draft comments on the criteria document, that the IESO plans to file with the NPCC.

This new NPCC Document was developed by the CO-11 Inter-Control area Restoration Coordination Working Group (IRCWG) by splitting off the system restoration content from the A-3 "Emergency Operation Criteria" document and by making necessary updates and revisions to ensure that it conforms to the system restoration requirements in the existing NERC standards.

Please review the documents and provide your comments and/or concerns, either to the IESO or to NPCC directly. In order to better understand the impacts of these criteria and share concerns or comments if any, a conference call or a meeting group could be facilitated by the IESO if required. Also, please let us know if you require additional information or clarification.

Regards,

Biju Gopi,
MS&O - Reliability Standards & Assessments,
