Subject: Dispatching Variable Generation Market Rule Amendments Posted

Members of SE-91/Dispatch Technical Working Group Members:

Additional market rule amendment proposals for dispatching variable generation have been posted to the IESO website. These market rules cover the Market Schedule, Congestion Management Settlement Credits, Tie-Breaking, and Publication Requirements of the 5-Minute Forecast for Variable Generation. The market rule amendments will be introduced at the August 21 Technical Panel meeting.

The proposals, (MR-00381-R04: Market Schedule and CMSC for Variable Generation; MR-00381-R05: Tie Breaking for Variable Generation; MR-00381-R06: Publication Requirements: 5-Minute Forecast for Variable Generation) can be reviewed on the Technical Panel webpage (August 21, 2012 materials, agenda item 6): http://www.ieso.ca/imoweb/amendments/tp_meetings.asp.

The IESO has recommended that the Technical Panel agree to post the rule amendment proposals for stakeholder comment for a period of three weeks, ending on September 13, 2012.

These proposals are the last set of dispatch related market rules for variable generation for the current phase of renewables integration, and are based on stakeholder consultations through SE-91 Renewable Integration which includes the Dispatch Technical Working Group (DTWG) and the Floor Price Focus Group (FPFG). Pending the Technical Panel's agreement to post MR-00381-R04 to R06, stakeholders will have the opportunity to review and submit written comments on the consolidated package of proposed market rule changes related to the dispatch of variable generation:

[R02: Dispatching Variable Generation](#) (posted on July 19, 2012)

[R03: Floor Prices for Variable and Nuclear Generation](#) (posted on July 19, 2012)

R04: Market Schedule and CMSC for Variable Generation (Aug 21st Technical Panel materials, agenda item 6)

R05: Tie Breaking for Variable Generation (Aug 21st Technical Panel materials, agenda item 6)

R06: Publication Requirements – 5-Minute Forecast for Variable Generation (Aug 21st Technical Panel materials, agenda item 6)
