A869	Public Key Infrastructure (PKI) Decommissioning	N/A	N/A	TBD	RT: 31-Dec-11 NRT: N/A	Under Development	<p>IESO Developer's Toolkit - Implementation Manual Issue 11.1: http://www.ieso.ca/imowebpub/201102/IMO_MAN_0023_v11.1.pdf</p> <p>IESO Participant Technical Reference Manual - Issue 25.1: http://www.ieso.ca/imowebpub/201106/IMO_MAN_0024_v25.1.pdf</p> <p>Software Download IDK v3.3 Available for download: http://www.ieso.ca/imowebpub/201102/sidk3.3.exe</p>	<p>Description of Problem: Over the past year IESO has been working to streamline the user authentication process for the Market Participant Interface (MPI). As the IESO's Public Key Infrastructure (PKI) decommissioning project draws to a close, Market Participants will no longer be able to use current existing authentication method to access Market Participant Interface (MPI) using (PKI) digital certificates and IESO Developer's Toolkit (IDK) 3.2 as of December 31, 2011. The IESO will no longer support the use of digital certificates past December 31, 2011.</p> <p>Description of Fix: IESO has made available for download version 3.3 of the IDK which has the ability to use username/password as a method of authentication. IDK 3.3 has been available to users since early 2011. IESO is integrating the MPI into the IESO Portal so that single sign-on authentication through portal will allow users to access the MPI. This new version will retain all existing functionalities with addition of EDAC functionalities.</p> <p>Market participants will be provided username/password information to use with IDK 3.3, if not already provided during EDAC Market Trials. Market participants who have physical market access will be given a portal account, if they do not already have one, and be associated with the "Energy Market" community in the IESO Portal.</p> <p>Description of Result: Market participants will no longer be able to use IDK 3.2 and MPI using digital certificates as authentication method. Authentication using digital certificate via IDK 3.2 will no longer work as of December 31, 2011.</p> <p>Market Participants will need to authenticate via IESO Portal's Energy Market community to access MPI. Participants will need to use IDK 3.3 with username/password authentication method. IDK 3.3 will retain existing functionality and also contain additional EDAC functionalities.</p>
A871	Decommissioning of the Participant Lifecycle (PLC) System	N/A	N/A	3-Nov-11	14-Dec-11	Under Development	N/A	<p>Description of Problem: As part of the Participant life cycle (PLC) system replacement, the IESO will decommission PLC in Q3 2011. PLC will be replaced by the Customer Data Management System (CDMS).</p>

ID	Title	Appl / Server	Ver.	Sandbox	Production	Implementation Status	Reference Documents	Description of Change
								<p>The IESO is preparing to make the new Customer Data Management System (CDMS) available to Market Participants in 2012.</p> <p>Description of Fix: When the decommissioning of PLC occurs, users will still be able to obtain relevant PLC data by contacting the IESO's customer relations team. All market participants will be affected by the change.</p> <p>Description of Result: PLC will no longer be available for use by Market Participants. PLC type information will be available by contacting IESO Customer Relations until the new CDMS system is made available to Market Participants.</p>
