

Stakeholder Engagement involving Traders

Intertie Trading Standing Committee
September 26, 2007
Guy Springgay

- The IESO encourages all stakeholder sectors with an interest in a decision to participate in the process. We want everyone to have an equal opportunity.
- We hope that those involved would keep others in their sector informed and have a willingness to represent both their company and sector views on an issue.
- A stakeholder plan for many initiatives – e.g. - for market development policy and planning decisions, for operation and implementation decisions. The plan will spell out the objectives, which stakeholders are most affected, what approach and how to best get input - such as by e mail , webcast or face to face meetings. The schedule of activities and decision making steps are included with each plan.

- We want to provide meaningful and timely opportunities for you to provide input, and that you have the right amount of information to understand all options.
- We will use your input to develop options that try to address differing points of view.
- Our decision making processes will be transparent and decision making stages will be clearly defined at the outset. All your views, both positive and negative, will be provided to IESO management and the Board. Our decisions, along with the rationale will be fully communicated to you along with an explanation of how your input was taken into account.
